

Problems Arrays(Day 5)

Problem no:1

Question: Given an array of N integers, find the sum of all elements in the array.

```
a=int(input())
b=list(map(int,(input().split())))
print(sum(b))
```

```
4
1 2 3 4
10
```

Problem no:2

Question: Given an array of N integers, print all the elements of the array separated by spaces.

```
a=int(input())
b=list(map(int,(input().split())))
for i in (b):
    print(i,end=" ")
```

```
... 3
1 2 3
1 2 3
```

Problem no:3

Question: Given an array of N integers and a number X, check whether X is present in the array or not.

```
a=int(input())
b=list(map(int,(input().split())))
c=int(input())
if c in b:
    print("yes")
else:
    print("No")
```

```
... 3
1 2 3
2
yes
```

Problems Arrays(Day 5)

Problem no:4

Question: Given N integers, print the index of the largest element in the array.

```
1  ▶ a=int(input())
    b=list(map(int,(input().split())))
    print(b.index(max(b)))
```

✓ ... 6
1 2 3 4 5 6
5

Problem no:5

Question: Given an array of integers, find the index of the minimum element in the array

```
[ ] ▶ a=int(input())
    b=list(map(int,(input().split())))
    print(b.index(min(b)))
```
